4-9 of the original specification). The boron content of the powder mixture is between 0.03% and 0.2% by weight at a boron share of the master alloy powder of less than 10% by weight. The weight ratio between the nickel and the boron share of the powder mixture exceeds 5 and the master alloy powder has an average particle size of between 10 and 90 μm (p. 2 ln. 21-25).

According to claim 2, the boron content of the powder mixture lies between 0.10% and 0.15% by weight (p. 3 ln. 21-26).
